# June hath xxx. daies.

This month of June, vscl clarified Whay,

Boyled with colde hearbes drinke alway:

From violent exercise now abstaine,

Except thou wilt in trouble remaine.

A perfect rule for all my friendes,  
most easie for their memory:  
How all the Termes, begins and ends,  
with their returnes perperually.

The first of Hillarie Terme shall bee,  
In Januarie the twentieth thee:  
And on the twelfth of Februarie,  
This Terme doth end most certainly.  
Hillarie Terme } Octobis. Quindeno Hillarie.  
hath 4. returnes. } Crastino. Octabis Purific.

And Easter Terme, from Easter day,  
The Wednesday fortnighte ginner alway:  
And till Th'ascension day be past,  
The Sunday next this Terme dooth last.  
Easter Terme } Quinque. Mense. Tres. Quindeno  
hath 5. returnes. } Palcha: Crastino Aicentio.

The Friday after Trinitie,  
this Terme begins assuredly:  
And as our Lawyers all doe write,  
It endes the Wednesday fortnighte.  
Trinitie Terme, } Crastino. Trinitie, Octobis.  
hath 4. returnes. } Quindeno & Tres Trinitatis.

If Michaelmas Terme you seeke to finde,  
The ninth of October, beare in mixde:  
And ends so I doe well remember,  
The twentieth eight day of November.  
Michaelmas Terme } Octabis. Quindeno. Tres Micha.  
hath eight returnes. } Mense Mich. Crastine Anima.  
} Crastino Martini. Octabis.  
} Quindeno Martini & Finis.

Th'exchequer opens certainly,  
Eight daies before the terme begin,  
Except the terme of trinitie,  
which once foure daies hath bene.

Sol et Luna post Deum sunt omni-

¶ Imprinted at London  
for the Companie of  
Stationers.

Of the effects of the great Eclipse of the  
sunne, which happened in the yeere of our  
Lord God 1605. which began to take his effect  
the last yeere 1606. and so dooth continue his force & in-  
fluence vntill the next yeere. 1608.

**I**n the yeere of our Lord God 1605. vpon the second  
of October, halfe an houre after one of the clocke in the  
after noone, did happen a great eclipse of the sunne, which  
eclipse as Meslahalath witnesseth, & also experience her selfe  
teacheth, that there neuer happeneth any such defect & obs-  
curitie of the sunne, which doth not presigne & also foreshew  
some great accident to come to passe: and also Ptolome  
himselfe, the Prince of Astrologers affirmeth, that  
the fatall conuersions, overthrowes, and destructions of  
kingdomes, may Astrologically be prognosticated by the  
defects, and eclipses of the sun and moone. wherby Thales  
Milesius, as Plinie credibly reporteth, did certainly foretell  
sundry changes, and alterations of States and kingdomes,  
to happen in Asia, which afterword came effectually to  
passe, euen according to his Astrologically predictions: and  
the like is affirmed by diuers other well scene that way.  
Wherevpon eclipses by the best Astrologers, haue bene  
the moze specially regarded, & obserued. But now I will  
returne to this present eclipse, fro whence I haue a little  
digressed. It is first to be noted, that there neuer hapned  
such a great eclipse of the sunne, since the yeere of our Lord  
God 1567. and therfore as Leouitius saith: Eclipses enim  
solis, praesertim cum plurimum obtenebratur, non leues ac-  
repnes, sed semper atrocis funesto, et tragicos exitus afferre  
solent. The sunne being eclipsed in that signe Libra, which  
is of the spheric triplicitie, which is the house of Venus,  
mafe. of the day, occidentall, naturally hote & moist, and of  
complexion sanguine, governour and ruler of the raines  
and buttocks. Et. Nowe according to the nature of the  
signe, it foresheweth many blustering winde, much mis-  
ling raines, & moist soultrey hote weather, very vnhealth-  
full to mankind, many inclinations to tempests, thunders,  
rings,

derings, and lighnings, much greivous sicknesses, Pe-  
silences, and famine: controuersies in religion, violent  
deaths, much fraude and deceit, dangers in iourneys, in-  
tercepting of letters, many Embassadors, much secret bu-  
sines, great distemperancie to men of middle yeeres, by sur-  
setting and such like, which will induce many inflammati-  
ons of the liuer, with much corruption of blood: It also  
denoteth but an unhappy state to pregnant women, with  
other feartfull accidents, which will chiefly oppresse, and  
afflict those regions, prouinces, territories, and cities,  
which are principally vnder the dominion, and regiment,  
of the first Quadrangle and signe Libra, as Bactria, Caspia,  
Thebaida, Trogloditia, Ethiopia, Thuscia, Sabaudia, Lino-  
ria, Austria, Caeta, Landa, Scutia, Placentia, Argentina, Spi-  
ra Francofordia, Frisinga Landshuta, Vienna, Austria. &c.

Furthermore, those persons shall feelee the violence of  
this Eclipse, which hath Libra placed in their Horoscope,  
or in their Radix or Revolution, haue the sun, the moone,  
the Lord of the Ascendant, the Lord of the nativitie, Me-  
ditum Caeli, pars fortunæ, or the other true Planets, in the  
18 degree (or there about) of Libra, Cancer, Capricornus,  
or Aries. And this in effect, is all that I haue presently to  
say, touching the influence, and sequell, of the foresaid late  
Eclipse, Sufficiat quod satis est. Whatsoever befalleth in o-  
ther places, I trust England shall still continue in Gods  
fauour. wherefore let vs humbly solitise, and beseech his  
almightie goodnes, by vnfained and zealous prayer, to a-  
bridge his punishments, and extend his blessings towards  
vs now and euer-moore. Amen.

Of the Eclipses which shall happen this yeere of our  
Lord God. 1607.

There shall be seene this yeere foure Eclipses, two of the  
sunne, and two of the moone, whereof the first of the  
sunne, and both of the moone, shall appeare in our Ho-  
rizon. But the latter of the sunne shall happen in the Coun-  
try of America, and therefore I will omit say to write of it.

## A Prognostication

Upon the 16 day of February, being Shrove Monday, the bright Globe of the sunne shall be eclipsed (by the direct interposition of the body of the moone, betwene him & the earth) about 8 of the clock in the morning. The whole time of the continuance of this Eclipse, will be one houre & 40 minutes. The degrees or points eclipsed are 3. and 30 minutes. &c.

There will be a little eclipse of the moone this present year 1607. on the 3 day of March, about 49 minutes after 4 of the clocke in the afternoons, the points or degrees eclipsed, are 1. and 30 minutes. The time of the duration, will be one houre & 28 minutes. And because that this eclipse is but small, and for that she will be freed from her obscuritie, by that time that she comes for to be perfectly scene in our Horizon, (as I gather) therefore I cease for to write any further, concerning the defects, or effects of this particular Eclipse.

There will sensibly and visibly appeare in our Horizon, a partial Eclipse of the moone, upon the 27 of August being Thursday, about thre of the clocke in the morning, she being at that instant diametrically opposite unto the sun, and in the second face of Pisces, in a signe of the waterie triplicite, naturally colde, and moist, of complexion Somaticke, feminine, northerly, common, septentrinall, the house of Jupiter, and the exaltation of Venus, gouverneur and ruler of the face, and in a peragratiō or mansion that is moist. This Lunare obscuration, doth continue from the beginning to the end, two houres & 25 minutes. The points, or degrees eclipsed, are 5 and 2 minutes. Nowe Jupiter being Lord of the place of the eclipse, and but evill disposed being Retrograde, and also the Lord of the 8th house being in like manner Retrograde, and the moone eclipsed in the 8 house, which is the house of Death. &c. All these considerations doth induce me to iudge, that this Eclipse doth generally signifie, great and most dangerous contagions, and deadly pestiferous diseases.

Biso Cardanus Aphorismes Astronom. lib. 7. saith, that as often as any Eclipse happeneth in any signe of the waterie

## Newe. 1607.

rie triplicitie, it portendeth scarcitie, barrenesse, and pe-  
 rilous diseases. Proclus saith, that generally when any  
 Eclipse epyther of Sunne or Moone happeneth in watery  
 signes, that it signifies the death of the comon people, con-  
 tinuall motiues to warre, and great destruction of fishes,  
 as well of the fresh water, as of the sea. It also foreshew-  
 eth monstrous fishes to appeare in the sea coastes.

Ptolomie saith, that the influence of this Eclipse, shall  
 fall vpon fishes, and water fowles: and it doth also signi-  
 fie the inconstancie, varietie and change, of diuers men, in  
 their fashions, and manners. And so bryefely, thus much  
 at this time of this Eclipse.

## A Description of the foure quarters of this yeere of our Lord God, 1607.

Of Winter. Sun in ♄. 22. X.

**W**inter, according to our vsuall computation, begin-  
 neth the 11 day of December, in the yeere foregoing,  
 in the first entring of the sunne into the first degree of the  
 signe Capricornus, at which time, the sunne shall be at his  
 greatest South declination, from the Equinoctiall line:  
 which maketh with vs the shortest day in the yeere. This  
 season is of nature cold and moist, hegumatics, answering  
 to the complexion of old men, and agreeable to the element  
 of water.

Of the Spring. Sun in ♈. 8. II.

**T**he Spring beginneth the 11 of March, at which time  
 the sun doth enter into the Equinoctiall signe Aries, the  
 day and the night being of an Equall length through the  
 whole world. This quarter is hote and moist, and that  
 temperately without extremitie, and therefore accounted  
 the most wholesome time in all the yeere. For nowick-  
 nesses and paines gotten befoze, may be best remedied and  
 remoued: and griefes and diseases feared to come, may be  
 best prevented and auoyded.

## A Prognostication

Of Sommer. Sun in ♋. ♏. m.

**S**ommer beeginneth the 11 of June, when the sunne ent-  
ereth into Cancer, making the longest day, and shortest  
night in the whole yee. This season, according to his  
proper nature, is hote and dry, resembling the element of  
fire, and complexion of choller, bringing all fruites to their  
ripenes, Cattell to thei<sup>r</sup> fatnes, & men to their wealth.

Of Harvest. Sun in ♏. m. ♏.

**T**he Harvest quarter called Autumnne, beeginneth the 13  
of September, when the sun. entereth into Libra, ma-  
king the second Equinoctiall, the day and the night being  
of a just equall length. This quarter is naturally cold and  
dry, variable and vnconstant, warme in the day time, and  
cold in the night time. Very dangerous for sicknesses and  
diseases in some persons, as in those that be aged, or such  
as be not perfectly cured of their summer maladies. &c.

**A Declaration of the inclination and disposition of**  
the winds and weather, according to the influences & diuers  
motions of the erraticall & fixed starres: with the day, howre,  
and minute of the change of the Moone, her full, & quarters:  
and also of the rising and setting of the Sunne in euery 7. day  
of euery month of this yee of our Lord God. 1607.

Of Ianuarie.
